ARCH TECHNOLOGIES

Sharpening your hidden skills for a brighter future

Full Stack Development

Full Stack Development involves learning to build and maintain websites using languages like HTML, CSS, JavaScript, and frameworks like React or Django. You'll learn front-end design, back-end logic, and database integration to create responsive, user-friendly sites. It's important for establishing online presence, enabling businesses to reach global audiences, and driving digital innovation across industries.

Task 1: Music Player

Design a web-based music player with playlist functionality. Implement play, pause, skip, and volume control functionalities.

Task 2: Social Network Platform

Develop a full-fledged social networking platform with user profiles, posts, comments, likes, and friend requests. Implement real-time updates using WebSockets.

Submission Details:

- Make a ZIP or RAR file of the Code or any related things (if any), or share a GitHub repository link. Email it to submissions.archtech@gmail.com before the 27th of this month.
- For any technical queries or challenges faced during task completion, Email your questions to queries.archtech@gmail.com Our team will do our best to assist you.
